Electrical Specifications @ 25 °C – Operating Temperature – 40°C to +130°C

NOTES:

1. The temperature of the component (ambient temperature plus tem-per-ature rise) must be within the specified operating temperature range.
2. The maximum current rating is based upon temperature rise of the component and represents the dc current which will cause a typical temperature rise of 40°C with no air flow when both one turn wind-ings connected in parallel.
3. To calculate the value of the terminating resistor (Rt) use the follow-ing formula: Rt (W) =VREF * N / (Ipeak_primary)
4. The peak flux density of the device must remain below 2000 Gauss. To calculate the peak flux density for a uni-polar current use the following formula: BPK = 14.29 * VREF * (Duty_Cycle_Max) * 108 / (N * Freq_kHz) for bi-polarcurrent applications divide BPK as calculated above by 2.
5. For RoHS compliant parts add suffix NL to the part number.
6. Add T suffix to the part number for tape and reel packaging.
