PL1435	16.1	5.10	27.2	32.0	6.27	25.9	0.32	4.52E-10	67.9
PL3059	50	2.60	113.05	133	10.5	72.9	0.19	4.52E-10	67.9

Notes: 1. Reference values are for an inductor with a 55°C temperature rise. The core loss is 10% of the copper loss at the ET listed and 500kHz.

2. Core does not saturate abruptly. The ET and DC current are limited by the desired inductance and temperature rise.

3. In high volt-time applications, additional heating in the component can occur due to core losses in the inductor which may necessitate derating the current in order to limit the temperature rise of the cozmponent. In order to determine the approximate total losses (or temperature rise) for a given application, both copper and core losses should be taken into account.

Estimated Temperature Rise:

$Trise = K3 * (Coreloss(W) + Copperloss(W)^{.833}$ (C)

$CopperLoss = Irms^2 * DCR\_Typical\ (m\Omega) / 1000$

$CoreLoss = K2 * (Freq\_kHz)^{1.26} * (\Delta B)^{2.11}$

$\Delta B = K1 * Volt\text{-}\mu sec * 100$

4. Optional Tape & Reel packaging can be ordered by adding a "**T**" suffix to the part number (i.e. PL1434 becomes **PL1434T**).

5. The temperature of the component (ambient plus temperature rise) must be within the stated operating temperature range.

6. To order RoHS-compliant parts (Sn100 Lead Finish), add suffix 'NL' to the part number (i.e. PL3059 becomes **PL3059NL**).
