NOTES:

1. Add suffix "NL" for RoHS compliant version; i.e. PL10301 becomes PL10301NL.
2. For Tape & Reel packaging, add "T" suffix at the end of the part number: i.e. PL10301T.
3. Inductance is measured at 100KHz, 0.1Vrms across terminals 2-5 with terminals 3 and 4 connected together.
4. Leakage Inductance is measured at 100KHz, 0.1Vrms across terminals 2-5 with terminals 3 and 4 connected together and secondaries shorted.
5. It is possible to add a small gap to the transformer. Gapped transformers are non-standard and can be made available upon request, but are not typically available from stock. To request a gapped version of the transformer, add a suffix "G" to the base number, i.e. PL10301G or PL10301GNL. The nominal inductance with a gap can be calculated as: Primary inductance (µH Nominal) = 0.69(Primary Turns)².
6. It is possible to add a primary side aux. winding to any of the above configurations as shown in the schematics. Transformers with primary side aux. windings are non-standard and can be made available upon request, but are not typically available from stock. The primary aux. winding can be between 2 and 16 turns. To add a primary aux. winding to a given base, use the extension .00X. For example, to add a 4T aux. winding to the base part number PL10301NL, use the part number PL10301.004NL. To add a 16T aux. winding, use the part number PL10301.016NL.

NOTES:

- To determine if the transformer is suitable for your application, it is necessary to ensure that the temperature rise of the component (Ambient plus temperature rise) does not exceed its operating temperature. To determine the appropriate temperature rise of the transformer, refer to the graphs below.

Core Loss vs. Flux Density

Temperature Rise vs. Power (W) Dissipation

NOTES:

1. All temperatures measured on the package leads.
2. Maximum number of reflow cycles not to exceed 2.
